

Undergraduate

Purpose and Goals

The Chemistry Department offers a Bachelor of Science in Chemistry. The department is an ACS-accredited program that has multimedia-equipped classrooms, modern laboratories, and state-of-the-art instrumentation for teaching and research in chemistry and allied fields. Our faculty members have specializations in analytical, environmental, inorganic, organic, physical, and biochemistry. We create a personal and supportive environment for our students, and faculty are directly involved in the professional development of students through undergraduate and graduate research. Most of our students continue in chemistry-related fields after graduation, often attending graduate schools in chemistry, biochemistry, and medicine, or pursuing careers in industrial research or biomedical sciences.
