

Undergraduate

Purpose and Goals

The Department of Mathematics offers a Bachelor of Science in Mathematics. Through an interdisciplinary program, experiential learning opportunities, and research partnerships, the Department of Mathematics continues to be an innovative force in undergraduate education. Our curriculum equips students with critical thinking, analytical skills and high quality mathematics content knowledge and prepares them to make an impact on the global community. The department provides a quality instruction, research and outreach program in mathematics that produces independent learners equipped with the problem solving and decision-making techniques necessary to meet the challenges of their chosen careers. The department provides comprehensive educational opportunities and advancements to enrich the life of its students.
