Computer Science

Department Mission

The mission of the Department of Computer Science consists of three interrelated components: (1) providing the highest quality instruction to the students; (2) conducting leading-edge research in computer science and engineering; and (3) providing leadership and service to our professional communities. Computer Science’s faculty and staff are committed to excellence and updating the program to meet the present and future needs of industry and society.

Purpose and Goals

The Bachelor of Science in Computer Science Program is designed to:

1. Provide a high-quality degree program in computer science that will prepare students for lifelong learning as they pursue professional careers in computer science and leadership roles in the society in which they serve.
2. Provide our students with a strong foundation, state-of-the-art techniques, methodologies, and tools to specify, design, and develop computer-based solutions to complex systems problems.
3. Provide opportunities for faculty and students to contribute to the body of knowledge that serves the profession, by engaging in research, scholarly and other activities that support their interests and are in agreement with the goals and objectives of the College, and the University.
4. Prepare our students to communicate well, both orally and in writing, on moral and ethical development, in the knowledge of the liberal arts, and on the commitment to services to others.

Admission Requirements

Table 1. First-time Freshmen Requirements for Direct Admission to the Computer Science Program

<table>

Select one of the two concentration options below:

**Regular Program Concentration Requirements:**
- Computer Science Lower Level Elective
- Computer Science Lower Level Elective
- Computer Science Upper Level Elective
- Computer Science Upper Level Elective

**Cybersecurity Concentration Requirements:**
- COMP 3332  Cryptography
- COMP 4331  Computer Forensics
- COMP 4333  Ethical Hacking and Penetration Testing

One Concentration Elective (choose from):
- COMP 2313  Introduction to Information Security
- COMP 3331  Information Privacy
- COMP 4332  Mobile Security

**Natural Sciences Area Requirements**

Select one of the following sequences:

**Science Sequence 1**
- CHEM 1303  General Inorganic Chemistry
- & CHEM 1111  and General Chemistry Lab I
- CHEM 1304  General Inorganic Chemistry
- & CHEM 1112  and General Chemistry Lab II
- PHYS 2325  University Physics I
- & PHYS 2125  and University Physics Lab I

**Science Sequence 2**
- CHEM 1303  General Inorganic Chemistry
- & CHEM 1111  and General Chemistry Lab I
- PHYS 2325  University Physics I
- & PHYS 2125  and University Physics Lab I
- PHYS 2326  University Physics II
- & PHYS 2126  and University Physics Lab II

**Science Sequence 3**
- BIOL 1308  Biology for Non-Science Major I
- & BIOL 1108  and Biology for Non-Science Major I Lab
- PHYS 2325  University Physics I
- & PHYS 2125  and University Physics Lab I
- PHYS 2326  University Physics II
- & PHYS 2126  and University Physics Lab II

**Math Area Requirements**
- MATH 3302  Probability and Statistics
- MATH 3307  Linear Algebra

Total Hours: 121
All Computer Science Core Curriculum requirements are shown in the suggested degree program. All Computer Science majors must take ENGL 1301, ENGL 2311, a Global Awareness course (3-hour), MATH 2413, PHYS 2325, CHEM 1303 or BIOL 1308 (Please refer to the Science Sequence option in the Natural Science Area requirements section), as part of the University Core Curriculum. Also, please note that 3 hours of MATH 2413 counts toward the core curriculum and 1 hour counts toward the college requirements.

Students are required to take all courses in Sequence 1, or Sequence 2, or Sequence 3. The students meet the 12 hours Science requirement by taking 6 hours from the core curriculum and the remaining 6 hours from the Science Sequences. Please note that one 3 hour course and 3 - 1 hour lab courses will count in the 6 hours not included in the core curriculum.

**Technical Electives through Five-Year BS/MS Degree Plan Option**

Students may, upon approval to the Five-Year BS/MS Degree Plan Option (see Roy G. Perry College of Engineering Special Program (http://catalog.pvamu.edu/academicprogramsanddegreeplans/roygperrycollegeofengineering/#specialprogramstext)), apply up to six credit hours of graduate courses toward technical electives requirements.

**Eligibility to Take Upper Division College Courses**

The Roy G. Perry College of Engineering requires an eligibility standard for the students to take upper-division college courses. Students must have completed or been currently enrolled in all lower division (1000 and 2000 level) courses in English, mathematics, science, and engineering to be eligible to enroll in upper-division (3000 or 4000 level) courses in the Roy G. Perry College of Engineering. Students in Computer Science Program must earn a “C” or better in each of the math, science, English, and computer science courses to be eligible to enroll in upper-division (3000 or 4000 level) courses in the College. Students transferring to the Roy G. Perry College of Engineering with 60 or more semester hours from another institution will be allowed a period of one semester to comply.

**Purpose and Goals**

The Master’s degree programs prepare graduate students for positions in industry and research. Master’s degree graduates are also provided with a foundation for continuing their study at the doctoral level in Computer Science or Computer Information Systems.

The major objectives of the programs are to:

1. Address the critical shortage of professionals in Computer Science and Information Technology in Texas and the nation;
2. Provide an avenue for computer professionals in the industry to upgrade their professional skills; and
3. Prepare graduates to pursue a terminal degree in Computer Science and Computer Information Systems.

A student with a bachelor’s degree in a discipline other than computer science must possess a computer science background equivalent to the following PVAMU courses before being admitted to:

**MS in Computer Science Program:**

Professional and Honor Societies

The Department sponsors a certified student chapter of the Association for Computing Machinery. Membership (local and national) is open to all full-time Computer Science majors. The department also sponsors Upsilon Phi Epsilon (Computer Science Honor Society) for all Computer Science majors with a GPA of 3.0 or better. Any student having completed 64 semester hours of course work (18 hours of core computer science courses) is eligible for consideration.

Courses

**COMP 1101 Intro to Basic Engr & Comp Sci: 1 semester hour.**
Students will become aware of the various disciplines of engineering, computer science and technology, ethical and professional responsibilities in these fields, creativity and design.
Prerequisites: COMP 1021 or COMP 1102.
Co-requisite: GNEG 1010.

**COMP 1102 Introduction to Computer Science Lab: 1 semester hour.**
This lab component will cover the overview of the current job opportunities and some hands-on exercises to understand the current topics.
Prerequisites: COMP 1101 or COMP 1011.

**COMP 1121 Computer Science Lab I: 1 semester hour.**
A laboratory course in programming for computer science utilizing the concepts introduced in COMP 1213, including language concepts of input/output, constants, data types, control structures, loops, functions, enumerated data types, arrays and strings structures, exception handling.
Prerequisites: (MATH 1316 (may be taken concurrently) or MATH 1123 (may be taken concurrently)) or (MATH 1511 (may be taken concurrently) or MATH 1155 (may be taken concurrently)) or (MATH 2413 (may be taken concurrently) or MATH 2414 (may be taken concurrently) or MATH 1124 (may be taken concurrently)).

**COMP 1122 Computer Science Lab II: 1 semester hour.**
A laboratory course in programming for computer science utilizing the concepts in COMP 1223 in object-oriented programming concepts including classes, abstraction, data hiding, polymorphism, inheritance; as well as basic programming data structures including array based lists, pointers, basic linked lists, stacks and queues.
Prerequisites: (COMP 1336 or COMP 1213) and (COMP 1121 or COMP 1211) and (MATH 2413 (may be taken concurrently) or MATH 1124 (may be taken concurrently)).
Co-requisite: COMP 1337.
COMP 1300 Digital Communication: 3 semester hours.
Efficient communication in the digital world, including multi-media editing, web page/site design, publishing on the internet, and cloud computing. Social and ethical responsibility of using social media, surfing the internet, and information security. Fundamentals of Excel spreadsheets and MS Access together pertinent information analyzed, evaluate, interpret, display data, and draw conclusion. Team projects using Sharepoint and group presentation.

COMP 1315 Introduction to Computer Science: 3 semester hours.
Fundamentals of computer science and programming to include algorithm definition, concepts, semantics and logic, fundamental data types (character, integer, and floating-point) and their binary representations and limits, arithmetic and logical operators and precedence, program structure and flow, branching and looping, functions and parameters, and basic input and output methods, emphasizing modular design and implementation of an object-oriented language such as C++.

COMP 1336 Computer Science I: 3 semester hours.
Introduction to and practice of modern problem solving and programming methods. Special emphasis is placed on top-down modular design and implementation of robust and easily maintainable programs in a high-level, object-oriented language such as C++ to include external files, control structures, loops, scope, functions, output formatting, inline functions and function templates, enumerated data types, arrays, structures, exception handling.
Prerequisites: (MATH 1115 or MATH 1511) or (MATH 1123 or MATH 1316) or (MATH 1124 or MATH 2413).
Co-requisite: COMP 1121.

COMP 1337 Computer Science II: 3 semester hours.
COMP 1422 Computer Science and Laboratory II: 4 semester hours.
Continuation of COMP 1214 with continued emphasis on program development techniques, array based lists, pointers, basic linked lists, classes, abstraction, data hiding, polymorphism inheritance, stacks and queues.
Prerequisites: COMP 1336 or COMP 1213 and (COMP 1121 or COMP 1211).
Co-requisite: MATH 2413.

COMP 2300 Introduction to Web Design and Multimedia: 3 semester hours.
The role of internet and as a tool in business; design and development of simple internet applications using HTML; basics of scripting languages; development of home pages incorporating graphics, and multimedia.

COMP 2302 Applications Development using C#: 3 semester hours.
Introduction to developing Windows based applications using the Visual Studio C# language. Students will learn how to develop software for several types of (fun) applications using interactive forms, multimedia, graphics, images, Web services, streaming video, etc. Basics of developing simple games, incorporating web services such as Mapping, weather, You-tube, stock quotes, etc. will also be covered. Open to all majors.
Prerequisites: COMP 1013 or COMP 1315 or COMP 1213 or COMP 1336.

COMP 2303 Assembly Language: 3 semester hours.
Study of the logical design and internal operation of digital computers and programming using a macro assembly language. Using several practical exercises to illustrate machine structures and programming techniques for a typical microprocessor environment, such as the Intel processor/IBM PC architecture.
Prerequisites: COMP 1422 or COMP 1224.

COMP 2304 Digital Logic Circuits: 3 semester hours.
The design and implementation of digital logic circuits. Combinational and sequential circuit analysis. Digital circuit design optimization methods using random logic gates, multiplexers, decoders, registers, counters, and programmable logic arrays.
Prerequisites: (COMP 1422 or COMP 1224) or ((COMP 1337 or COMP 1223) and (COMP 1122 or COMP 1221)).

COMP 2310 Discrete Structures: 3 semester hours.
A bridge course between data structures/discrete mathematics and analysis of algorithms, to include reviews of functions and relations, basic combinatorics (set operations, counting, combinations, and permutations) and introductions to prepositional and predicate logic, discrete probability theory, recursive definitions, computational complexity, and proof techniques including mathematical induction. The concepts are illustrated by applications involving graphs, trees, networks and related algorithms.
Prerequisites: (COMP 1422 or COMP 1224) or ((COMP 1221 or COMP 1122) and (COMP 1337 or COMP 1223)).

COMP 2313 Introduction to Information Security: 3 semester hours.
Expose students to the concept of network security and make them aware of related information security and privacy problems. Topics in network security includes malware, social engineering attacks, Web application attacks, wireless security, access control, authentication, basic cryptography, and security in social medial and cloud computing. Various attack demonstrations and animations will be utilized. This course can be used as low-level CS elective.
Prerequisites: COMP 1422 or COMP 1224.

COMP 2314 Introduction to Java: 3 semester hours.
An introduction to the Java Programming language. Includes coverage of Java Development Kit (JDK), applications, creating applets for enhancing web pages, and an introduction to the object model, and object oriented programming. Prerequisites: Proficiency in at least one programming language. Can be used as a computer science lower level elective.
COMP 2315 Python Programming Language: 3 semester hours.
An introduction to the fundamentals of python programming. It covers various topics, including variables and data types, functions, file input and output, and recursion. Packages for data processing and analytics such as NumPy, Scipy, Pandas, Scikit-learn, and Matplotlib will be introduced. Students will program using popular platforms like PyCharm and Jupyter notebook.
Prerequisites: COMP 1337 or COMP 1223.

COMP 2336 Data Structures: 3 semester hours.
Fundamental data structures; the implementation and application of binary files, stacks, queues, recursion, advanced linked lists, trees, graphs, data compression, heap, priority queue, and sorting techniques.
Prerequisites: (COMP 1422 or COMP 1224) or (COMP 1337 or COMP 1223) and (COMP 1122 or COMP 1221).

COMP 3301 Embedded Systems: 3 semester hours.
Examines how to design, program, and test embedded systems that interact with the physical world. Topics include microcontrollers, hardware interfacing, sensors, and real time programming.
Prerequisites: COMP 2336 or COMP 2013.

COMP 3303 Digital Logic Circuits: 3 semester hours.
The design and implementation of digital logic circuits. Combinational and sequential circuit analysis. Digital circuit design optimization methods using random logic gates, multiplexers, decoders, registers, counters, and programmable logic arrays.
Prerequisites: COMP 2303 or COMP 2033.

COMP 3304 Computer Organization: 3 semester hours.
The study of a computer as a series of levels, each one built on its predecessor. Digital logic level, the microprogramming level, the conventional machine level, the operating systems level, and the assembly language level.
Prerequisites: COMP 2304 or COMP 2043.

COMP 3305 Analysis of Algorithms: 3 semester hours.
Introduction to algorithm design and analysis, computational complexity, and NP-completeness theory, emphasizing design, appropriate algorithms and data structures to solve a given problem efficiently, including divide- and-conquer techniques, greedy methods, and dynamic programming.
Prerequisites: (COMP 2336 or COMP 2013) and (COMP 2310 or COMP 2103).

COMP 3306 Operating Systems: 3 semester hours.
Basic functions of operating systems including device management, multi-programming, job management, memory management, and input/output processing.
Prerequisites: COMP 2336 or COMP 2013 or (ELEG 4339 or ELEG 4393) and (COMP 3304 or COMP 3043).

COMP 3321 Graphics and Visual Computing: 3 semester hours.
Principles of interactive computer graphics; Topics include fundamental techniques in graphics, graphic systems, graph communication, geometric modeling, rendering, computer animation, visualization and virtual reality and other recent developments in computer graphics.
Prerequisites: COMP 2336 or COMP 2013.

COMP 3322 Software Engineering: 3 semester hours.
Formal software development, including the software life-cycle, modular and top-down design, validation and verification, and maintainable systems.
Prerequisites: COMP 2336 or COMP 2013.

COMP 3331 Information Privacy: 3 semester hours.
An introduction to the fundamentals of information privacy. It covers various topics, including data anonymization, differential privacy, location privacy, web and network privacy; multiparty computation, privacy in internet of Things; privacy in social networks, and secure data outsourcing. The course also provides students with hands-on experience in information privacy.
Prerequisites: COMP 2336 or COMP 2013.

COMP 3332 Cryptography: 3 semester hours.
An introduction to the fundamentals of cryptography. It covers various topics, including classic data encryption and decryption schemes, private and public key systems, message authentication, digital signature, and hash function. The course also provides students with hands-on experience in cryptograph.
Prerequisites: COMP 2310 or COMP 2103.

COMP 3333 Smart Device App Development: 3 semester hours.
Introduction to app development for smart devices, specifically for Apple iOS or Google Android devices. Differences between smart devices and traditional desk top computer systems will be examined. Various app development environments will be covered, including Xcode and programming language Objective-C for iOS, and Eclipse for Android.
Prerequisites: COMP 2013.

COMP 3343 Internet of Things: 3 semester hours.
Introduction to the Internet of Things (IoT), evolution and market around Internet of things, embedded systems and distributed systems to support IoT devices, communication and data storage in IoT, IoT design considerations and constraints, current components of IoT and future trends. The goal of this course is to help students with solid technical knowledge and skills to build IoT systems from the ground up. The course will focus on creative thinking and on hands-on project development.
Prerequisites: COMP 2013 or COMP 2336.
COMP 3395 Database Management: 3 semester hours.
File structures and access methods, database modeling design and user interface, components of database management systems. Information storage and retrieval, query languages, high-level language interfaces with database systems.

COMP 4100 Ethics and Social Issues in Computing: 1 semester hour.
Social and ethical implications of computing. Topics include history of computing, social context of computing, methods and tools of analysis, professional and ethical responsibilities, risks and liabilities of computer-based systems, intellectual property, privacy and civil liberties.

COMP 4207 Senior Design Project I: 2 semester hours.
A first of a two-part senior design course for computer science majors. Students will study computer systems design working as a design-team member, conceptual design methodology, design evaluations, project planning and management techniques, design optimization, systems manufacturing, cost considerations with an emphasis on students' activities as design professionals.
Prerequisites: (COMP 3222 (may be taken concurrently) or COMP 3223) and (COMP 3306 (may be taken concurrently) or COMP 3063). Co-requisite: COMP 4100.

COMP 4208 Senior Design Project II: 2 semester hours.
A continuation of COMP 4072 giving students the opportunities to complete a design project, make formal presentation, research, proposal writing, patents, and literature searches.
Prerequisites: COMP 4207 or COMP 4072.

COMP 4307 Special Topics: 1-3 semester hour.
Studying selected current and emerging topics in Computer Science. Courses may be repeated for credit when topics vary.

COMP 4311 Programming Languages: 3 semester hours.
Overview of programming languages, syntactic and semantic specification, virtual machines and fundamental issues in language design, analyzing of the imperative, object-oriented, functional, and declarative language paradigms. Introduction to formal grammars, including Backus-Naur notation studying the formal theory behind the design of a programming languages. Several programming languages will be analyzed.

COMP 4312 Computer Networks: 3 semester hours.
Introduction to the networking of computer systems to include the study of local area (LAN) and wide area (WAN) networks, data transmission, communications software, the architecture of networks, and network communication protocols.
Prerequisites: COMP 3306 or COMP 3063.

COMP 4314 Introduction to Parallel Computing: 3 semester hours.
Studying modern parallel computer architectures and the major parallel programming models in both shared and distributed systems. Topics include parallelism, concurrency, partition, divide-and-conquer, synchronization, load balancing, parallel algorithm design, implementation, and debugging.
Prerequisites: (COMP 2336 or COMP 2013) and (COMP 2310 or COMP 2103).

COMP 4315 Data Mining and Analytics: 3 semester hours.
Topics cover fundamental data mining and analytical algorithms and paradigms, including supervised learning, unsupervised learning, frequent pattern mining, link analysis, performance improvement through data interaction, etc. Focus on implementation and data visualization using modern programming languages in the knowledge discovery process. Latest concepts such as big data and social media are also discussed.
Prerequisites: MATH 3302 or MATH 3023 and (MATH 3307 or MATH 3073).

COMP 4316 Machine Learning: 3 semester hours.
Topics cover fundamental machine learning algorithms and paradigms including information-based learning, probability-based learning, instance-based learning, error-based learning, neural networks and deep learning, unsupervised learning, etc. Focus on implementation and data visualization using modern programming languages such as Python and R.
Prerequisites: (COMP 2336 or COMP 2103) or (COMP 2013 or COMP 2336).

COMP 4317 Formal Languages and Automata: 3 semester hours.
Introduction to formal grammars, including Backus-Naur notation studying the formal theory behind the design of a computer language. The corresponding types of automata that will serve as recognizers and generators for a language will be described.
Prerequisites: COMP 2310 or COMP 2103.

COMP 4323 Network Security: 3 semester hours.
Address the fundamentals of network security, including compliance and operational security; threats and vulnerabilities; application, data and host security; access control and identity management; and cryptography. Topics includes psychological approaches to social engineering attacks, Web application attacks, penetration testing, data loss prevention, cloud computing security, and application programming development security.
Prerequisites: COMP 4312 or COMP 4123.

COMP 4331 Computer Forensics: 3 semester hours.
An introduction to the fundamentals of computer forensics, it covers various topics, including cyber crimes, evidence extraction and control, data recovery, network forensics, mobile platform forensics, software reverse engineering, and legal issues. The course also provides students with hands-on experience in digital forensics.
Prerequisites: COMP 3306 or COMP 3063.
COMP 4332 Mobile Security: 3 semester hours.
Introduction to the principles of mobile security. It covers various topics, including wireless and mobile network security, security models of mobile device platforms, mobile service security, and security of the Internet of Things. The course also provides students with hands-on experience in the security of various mobile systems. 
Prerequisites: COMP 2336 or COMP 2013.

COMP 4333 Ethical Hacking and Penetration Testing: 3 semester hours.
This course teaches students the underlying principles and many of the techniques associated with the cyber-security practice known as penetration testing or ethical hacking. The course also provides students with hands-on experience on this topic. 
Prerequisites: COMP 3063 and COMP 4123.

COMP 4384 Human-Computer Interaction: 3 semester hours.
Focuses on the dynamics of human-computer interaction (HCI). Provides a broad overview of HCI as a sub-area of computer science and explores user-centered design approaches in information systems applications. Addresses the user interface and software design strategies, user experience levels, interaction styles, usability engineering, and collaborative systems technology. Students will perform formal software evaluations and usability tests. 
Prerequisites: COMP 3322 or COMP 3223.

COMP 4395 Data Base Management: 3 semester hours.
File structures and access methods, database modeling design and user interface, components of database management systems. Information storage and retrieval, query languages, high-level language interfaces with database systems. 
Prerequisites: COMP 2336 or COMP 2013.

COMP 5129 Research: 1 semester hour.
Topics cover literature review and summarization, scientific article writing, problem analysis and formulation, references and citation.

COMP 5300 Research Methods and Graduate Seminar: 3 semester hours.
Series of lectures given by faculty and by visiting computer and information scientists and information technologists.

COMP 5311 Fundamentals and Concepts of Programming Languages: 3 semester hours.
Study of the principles that form the basis of programming language design. Research topics in high-level languages including data abstraction, parameterization, scoping, generics, exception handling, parallelism, and concurrency. Additional topics include alternative language designs (imperative, functional, descriptive, object-oriented, and data flow designs) and an overview of interfacing with support environments. 
Prerequisites: COMP 4311 or COMP 4113.

COMP 5312 Advanced Computer Architecture: 3 semester hours.
New technological developments, including details of multiprocessor systems and specialized machines. The main focus is on the quantitative analysis and cost-performance tradeoffs in instruction set, pipeline, and memory design. Descriptions of real systems and their performance data are also given. Topics covered include quantitative performance measures, instruction set design, pipelining, vector processing, memory organization, input/output methods, and an introduction to parallel processing. 
Prerequisites: COMP 3304 or COMP 3043.

COMP 5313 Advanced Operating Systems: 3 semester hours.
Theoretical and practical aspects of operating systems, including an overview of system software, time-sharing and multiprogramming operating systems, network operating systems and the Internet, virtual memory management, inter-process communication and synchronization, and case studies. 
Prerequisites: COMP 3306 or COMP 3063.

COMP 5314 Advanced Database Management System: 3 semester hours.
Topics related to database design and data management in a database environment, including data normalization, functional dependencies, database design, query language design, implementation constraints, data integrity and security, and distributed data processing. The emphasis is on the concepts and structures necessary to design and implement a database management system. Selected advanced topics such as distributed databases, object-oriented databases, real-time databases, and multimedia databases will be discussed. Because of the many advances in information technology and the database development techniques, new business needs and opportunities are constantly emerging and, with them, the need to manage new technologies and applications effectively. This course explores these new application areas and the management approaches needed to make them successful. 
Prerequisites: CINS 5033 or CINS 5305.

COMP 5315 Design and Analysis of Algorithms: 3 semester hours.
Introduction to algorithm design and analysis, computational complexity, and NP-completeness theory. The course emphasizes how to design and choose appropriate algorithms and data structures to solve a given problem efficiently. Design methods covered include divide-and-conquer techniques, greedy methods, and dynamic programming. Problem domains covered include string matching, polynomials and matrices, graph theory, optimal trees, and NP-hard problems. 
Prerequisites: COMP 3305 or COMP 3053.

COMP 5316 Artificial Intelligence: 3 semester hours.
An introduction to artificial intelligence. The topics include intelligent agents, problem solving through search, knowledge representation and reasoning, planning, probabilistic reasoning and models, reinforcement learning, and their applications. 
Prerequisites: COMP 2336 or COMP 2013 and (MATH 3302 or MATH 3023).
COMP 5317 Computer Vision: 3 semester hours.
An introduction to the principles of computer vision. It covers various topics, including fundamentals of image formation, feature detection and matching, motion estimation and tracking, image classification, and deep learning with neural networks. The course also provides students with hands-on experience in developing computer vision algorithms.
Prerequisites: COMP 2336 or COMP 2013.

COMP 5324 Distributed Computing and Parallel Processing: 3 semester hours.
Comprehensive introduction to the field of parallel and distributed computing systems, including algorithms, architectures, networks, systems, theory, and applications. Distributed parallel computation models, and the design and analysis of parallel algorithms will be emphasized.
Prerequisites: COMP 5313 or COMP 5133.

COMP 5327 Data Mining: 3 semester hours.
Data Mining Studies algorithms, paradigms to find patterns and regularities in databases, perform prediction and forecasting, and improve their performance through data interaction. The knowledge discovery process includes data selection, cleaning, coding, and visualization. Data warehousing is also discussed.
Prerequisites: COMP 4953 or CINS 5033.

COMP 5329 Text Mining: 3 semester hours.
The study of text mining and information retrieval techniques including text structuring, patterns deriving, interpretation of the output, and empirical evaluation. Topics cover data analysis, text categorization, text clustering, concept extraction, text summarization, sentiment analysis, web search and their implementation.
Prerequisites: (COMP 2336 or COMP 2013) or (COMP 2103 or COMP 2310) and (MATH 3302 or MATH 3023).

COMP 5332 Computer and Network Security: 3 semester hours.
Survey of various computer attacks, viruses, malware, and operating system vulnerabilities and safeguards. Emphasis will be put on defense techniques and skills. A study of problems related to data communication and networking security; databases security; authorization mechanisms for systems with shared resources; cryptography and applications.
Prerequisites: (CINS 5043 or CINS 5304 or COMP 4312 or COMP 4123) and (CINS 5063 or CINS 5306 or COMP 3053 or COMP 3305).

COMP 5342 Software Engineering Processes: 3 semester hours.
Engineering of complex systems that have a strong software component. Topics include deriving and allocating requirements, system and software architectures, systems analysis and design, integration, interface management, configuration management, quality, verification and validation, reliability, and risk.
Prerequisites: COMP 2336 or COMP 2013 or CINS 5063 or CINS 5306.

COMP 5389 Applied Research: 3 semester hours.
A realistic experience in Computer Science to enhance the student's professional abilities. Students work on significant projects with industry firms or governmental agencies involving decision-making responsibility. Course requires oral and written report.

COMP 5391 Masters Project: 3 semester hours.
A candidate for the Master of Science in Computer Science with project option is required to perform a study, design, or investigation, under the direction of a graduate faculty advisor. An oral presentation and a written report are required. Prerequisite: candidacy for the Non-Thesis option of the Master of Science in Computer Science.

COMP 5690 Masters Thesis: 6 semester hours.
A candidate for the Master of Science in Computer Science with thesis option is required to perform a study, a design or investigation, under the direction of a faculty advisory committee. A written thesis is required to be presented, defended orally and submitted to the faculty advisory committee for approval.
